

## Chair/seating design

*Horgen Glarus  
Pof 1 Chair  
2000*

*Bent beech and acrylic, with electric lighting components*

The Swiss manufacturer Horgen Glarus has been producing this chair since 1916, but the Swiss design company, N2 recently updated the model by inserting an illuminated seat. The original design for an archetypal chair has been transformed in appearance and function. Combining functions, and questioning assumptions about appropriate use of objects, are characteristics of contemporary furniture design. 'Pof 1' stands for 'piece of furniture'.

The chair is constructed of bent beech wood with an acrylic panel for the seat. Below the acrylic is an electric light with wiring for the bulb running through one of the rear legs.

Chair, constructed of wood, with a translucent acrylic panel for the seat, beneath which is suspended a fluorescent electric light fitting, with wiring routed through one of the rear legs.
